

Practice Test 2

LISTENING

SECTION 1 Questions 1-10

Complete the notes. Use **NO MORE THAN THREE WORDS** for each answer.

KATE	
Her first impressions of the town	<i>Example Quiet</i>
Type of accommodation	(1)
Her feelings about the accommodation	(2)
Her feelings about the other students	(3)
Name of course	<i>Environmental Studies</i>
Difficulties experienced on the course	(4)
Suggestions for improving the course	(5)

LUKI	
First type of accommodation	(6)
Problem with the first accommodation	(7)
Second type of accommodation	(8)
Name of course	(9)
Comments about the course	<i>Computer room busy</i>
Suggestions for improving the course	(10)

SECTION 2 Questions 11-20

Complete the notes below. Use **NO MORE THAN THREE WORDS** for each answer.

There are many kinds of bicycles available:

racing

touring

(11)

ordinary

They vary in price and (12)

Prices range from \$50.00 to (13)

Single speed cycles are suitable for (14)

Three speed cycles are suitable for (15)

Five and ten speed cycles are suitable for longer distances, hills and (16)

Ten speed bikes are better because they are (17) in price but (18)

Buying a cycle is like (19)

The size of the bicycle is determined by the size of the (20)

SECTION 3 Questions 21-32

Questions 21-24

Circle the correct answer.

- 21** At first Fiona thinks that Martin's tutorial topic is
- A** inappropriate.
 - B** dull.
 - C** interesting.
 - D** fascinating.
- 22** According to Martin, the banana
- A** has only recently been cultivated.
 - B** is economical to grow.
 - C** is good for your health.
 - D** is his favourite food.
- 23** Fiona listens to Martin because she
- A** wants to know more about bananas.
 - B** has nothing else to do today.
 - C** is interested in the economy of Australia.
 - D** wants to help Martin.
- 24** According to Martin, bananas were introduced into Australia from
- A** India.
 - B** England.
 - C** China.
 - D** Africa.

Questions 25-30

Complete Martin's notes Use **NO MORE THAN THREE WORDS** for each answer.

*Commercially grown
banana plant*

Each banana tree produces

(25)
of bananas.

On modern plantations in tropical
conditions a tree can bear fruit after

(26)

Banana trees prefer to grow (27) and they require
rich soil and (28) The fruit is often protected by

(29)

Ripe bananas emit a gas which helps other (30)

Questions 31 and 32

Circle the **TWO** correct boxes.

Consumption of Australian bananas

A	Europe
B	Asia
C	New Zealand
D	Australia
E	Other

SECTION 4 Questions 33-41

Questions 33-35

Circle the correct answer

According to the first speaker:

- 33** The focus of the lecture series is on
- | | |
|---|-------------------------------------|
| A organising work and study. | C coping with homesickness. |
| B maintaining a healthy lifestyle. | D settling in at university. |
- 34** The lecture will be given by
- | | |
|--------------------------------------|------------------------------|
| A the president of the Union. | C a sports celebrity. |
| B the campus doctor. | D a health expert. |

According to the second speaker:

- 35** This week's lecture is on
- | | |
|-----------------------|---------------------------|
| A campus food. | C sensible eating. |
| B dieting. | D saving money. |

Questions 36-39

*Complete the notes. Write **NO MORE THAN THREE WORDS** for each answer.*

A balanced diet

A balanced diet will give you enough vitamins for normal daily living.

Vitamins in food can be lost through **(36)**

Types of vitamins:

(a) Fat soluble vitamins are stored by the body.

(b) Water soluble vitamins - not stored, so you need
a **(37)**

Getting enough vitamins

Eat **(38)** of foods.

Buy plenty of vegetables and store them in

(39)

Questions 40-41

Complete the diagram by writing **NO MORE THAN THREE WORDS** in the boxes provided.

Example
Try to avoid
.....
sugar, salt and butter

40
.....
milk, lean meat, fish,
nuts, eggs

41
.....
bread, vegetables and
fruit

READING

READING PASSAGE 1

You should spend about 20 minutes on **Questions 1-12** which are based on Reading Passage 1 below.

Right and left-handedness in humans

Why do humans, virtually alone among all animal species, display a distinct left or right-handedness? Not even our closest relatives among the apes possess such decided lateral asymmetry, as psychologists call it. Yet about 90 per cent of every human population that has ever lived appears to have been right-handed. Professor Bryan Turner at Deakin University has studied the research literature on left-handedness and found that handedness goes with sidedness. So nine out of ten people are right-handed and eight are right-footed. He noted that this distinctive asymmetry in the human population is itself systematic. "Humans think in categories: black and white, up and down, left and right. It's a system of signs that enables us to categorise phenomena that are essentially ambiguous."

Research has shown that there is a genetic or inherited element to handedness. But while left-handedness tends to run in families, neither left nor right handers will automatically produce off-spring with the same handedness; in fact about 6 per cent of children with two right-handed parents will be left-handed. However, among two left-handed parents, perhaps 40 per cent of the children will also be left-handed. With one right and one left-handed parent, 15 to 20 per cent of the offspring will be left-

handed. Even among identical twins who have exactly the same genes, one in six pairs will differ in their handedness.

What then makes people left-handed if it is not simply genetic? Other factors must be at work and researchers have turned to the brain for clues. In the 1860s the French surgeon and anthropologist, Dr Paul Broca, made the remarkable finding that patients who had lost their powers of speech as a result of a stroke (a blood clot in the brain) had paralysis of the right half of their body. He noted that since the left hemisphere of the brain controls the right half of the body, and vice versa, the brain damage must have been in the brain's left hemisphere. Psychologists now believe that among right-handed people, probably 95 per cent have their language centre in the left hemisphere, while 5 per cent have right-sided language. Left-handers, however, do not show the reverse pattern but instead a majority also have their language in the left hemisphere. Some 30 per cent have right hemisphere language.

Dr Brinkman, a brain researcher at the Australian National University in Canberra, has suggested that evolution of speech went with right-handed preference. According to Brinkman, as the brain evolved, one side

became specialised for fine control of movement (necessary for producing speech) and along with this evolution came right-hand preference. According to Brinkman, most left-handers have left hemisphere dominance but also some capacity in the right hemisphere. She has observed that if a left-handed person is brain-damaged in the left hemisphere, the recovery of speech is quite often better and this is explained by the fact that left-handers have a more bilateral speech function.

In her studies of macaque monkeys, Brinkman has noticed that primates (monkeys) seem to learn a hand preference from their mother in the first year of life but this could be one hand or the other. In humans, however, the specialisation in (unction of the two hemispheres results in anatomical differences: areas that are involved with the production of speech are usually larger on the left side than on the right. Since monkeys have not acquired the art of speech, one would not expect to see such a variation but Brinkman claims to have discovered a trend in monkeys towards the asymmetry that is evident in the human brain.

Two American researchers, Geschwind and Galaburda, studied the brains of human embryos and discovered that the left-right asymmetry exists before birth. But as the brain develops, a number of things can affect it. Every brain is initially female in its organisation and it only becomes a male brain when the male foetus begins to secrete hormones. Geschwind and Galaburda knew that different parts of the brain mature at different rates; the right hemisphere develops first, then the left. Moreover, a girl's brain develops somewhat faster than

that of a boy. So, if something happens to the brain's development during pregnancy, it is more likely to be affected in a male and the hemisphere more likely to be involved is the left. The brain may become less lateralised and this in turn could result in left-handedness and the development of certain superior skills that have their origins in the left hemisphere such as logic, rationality and abstraction. It should be no surprise then that among mathematicians and architects, left-handers tend to be more common and there are more left-handed males than females.

The results of this research may be some consolation to left-handers who have for centuries lived in a world designed to suit right-handed people. However, what is alarming, according to Mr. Charles Moore, a writer and journalist, is the way the word "right" reinforces its own virtue. Subliminally he says, language tells people to think that anything on the right can be trusted while anything on the left is dangerous or even sinister. We speak of left-handed compliments and according to Moore, "it is no coincidence that left-handed children, forced to use their right hand, often develop a stammer as they are robbed of their freedom of speech". However, as more research is undertaken on the causes of left-handedness, attitudes towards left-handed people are gradually changing for the better. Indeed when the champion tennis player Ivan Lendl was asked what the single thing was that he would choose in order to improve his game, he said he would like to become a left-hander.

Geoff Maslen

Questions 1-7

Use the information in the text to match the people (listed **A-E**) with the opinions (listed **1-7**) below. Write the appropriate letter (**A-E**) in boxes 1-7 on your answer sheet. Some people match more than one opinion.

- | | |
|----------|-------------------------|
| A | Dr Broca |
| B | Dr Brinkman |
| C | Geschwind and Galaburda |
| D | Charles Moore |
| E | Professor Turner |

Example

Monkeys do not show a species specific preference for left or right-handedness.

Answer

B

- | | | |
|----------|--|---------------------------|
| 1 | Human beings started to show a preference for right-handedness when they first developed language. | |
| 2 | Society is prejudiced against left-handed people. | |
| 3 | Boys are more likely to be left-handed. | |
| 4 | After a stroke, left-handed people recover their speech more quickly | than right-handed people. |
| 5 | People who suffer strokes on the left side of the brain usually lose | their power of speech. |
| 6 | The two sides of the brain develop different functions before birth. | |
| 7 | Asymmetry is a common feature of the human body. | |

Questions 8-10

Using the information in the passage, complete the table below. Write your answers in boxes 8 10 on your answer sheet.

	Percentage of children left-handed
One parent left-handed One parent right-handed	... (8) ...
Both parents left-handed	... (9) ...
Both parents right-handed	... (10) ...

Questions 11-12

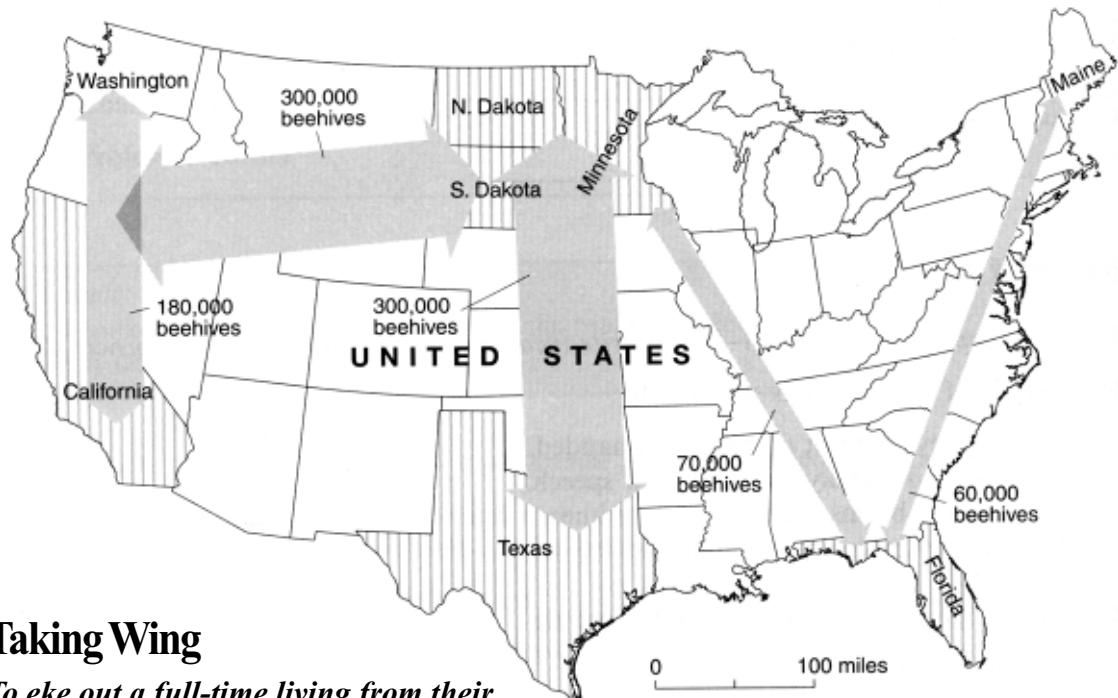

Choose the appropriate letters **A-D** and write them in boxes 11 and 12 on your answer sheet.

- 11** A study of monkeys has shown that
- A** monkeys are not usually right-handed.
 - B** monkeys display a capacity for speech.
 - C** monkey brains are smaller than human brains.
 - D** monkey brains are asymmetric.
- 12** According to the writer, left-handed people
- A** will often develop a stammer.
 - B** have undergone hardship for years.
 - C** are untrustworthy.
 - D** are good tennis players.

READING PASSAGE 2

You should spend about 20 minutes on **Questions 13-27** which are based on Reading Passage 2 below.

MIGRATORY BEEKEEPING

Taking Wing

To eke out a full-time living from their honeybees, about half the nation's 2,000 commercial beekeepers pull up stakes each spring, migrating north to find more flowers for their bees. Besides turning floral nectar into honey, these hardworking insects also pollinate crops for farmers -for a fee. As autumn approaches, the beekeepers pack up their hives and go south, scrambling for pollination contracts in hot spots like California's fertile Central Valley.

Of the 2,000 commercial beekeepers in the United States about half migrate. This pays off in two ways. Moving north in the summer and south in the winter lets bees work a longer blooming season, making more honey — and

money — for their keepers. Second, beekeepers can carry their hives to farmers who need bees to pollinate their crops. Every spring a migratory beekeeper in California may move up to 160 million bees to

flowering fields in Minnesota and every winter his family may haul the hives back to California, where farmers will rent the bees to pollinate almond and cherry trees.

Migratory beekeeping is nothing new. The ancient Egyptians moved clay hives, probably on rafts, down the Nile to follow the bloom and nectar flow as it moved toward Cairo. In the 1880s North American beekeepers experimented with the same idea, moving bees on barges along the Mississippi and on waterways in Florida, but their lighter, wooden hives kept falling into the water. Other keepers tried the railroad and horse-drawn wagons, but that didn't prove practical. Not until the 1920s when cars and trucks became affordable and roads improved, did migratory beekeeping begin to catch on.

For the Californian beekeeper, the pollination season begins in February. At this time, the beehives are in particular demand by farmers who have almond groves; they need two hives an acre. For the three-week long bloom, beekeepers can hire out their hives for \$32 each. It's a bonanza for the bees too. Most people consider almond honey too bitter to eat so the bees get to keep it for themselves.

By early March it is time to move the bees. It can take up to seven nights to pack the 4,000 or so hives that a beekeeper may own. These are not moved in the middle of the day because too many of the bees would end up homeless. But at night, the hives are stacked onto wooden pallets, back-to-back in sets of four, and lifted onto a truck. It is not necessary to wear gloves or a beekeeper's veil because the hives are not being opened and the bees should remain relatively quiet. Just in case some are still lively, bees can be pacified with a few puffs of smoke blown into each hive's narrow entrance.

In their new location, the beekeeper will pay the farmer to allow his bees to feed in such places as orange groves. The honey produced here is fragrant and sweet and can be sold by the beekeepers. To encourage the bees to

produce as much honey as possible during this period, the beekeepers open the hives and stack extra boxes called supers on top. These temporary hive extensions contain frames of empty comb for the bees to fill with honey. In the brood chamber below, the bees will stash honey to eat later. To prevent the queen from crawling up to the top and laying eggs, a screen can be inserted between the brood chamber and the supers. Three weeks later the honey can be gathered.

Foul smelling chemicals are often used to irritate the bees and drive them down into the hive's bottom boxes, leaving the honey-filled supers more or less bee free. These can then be pulled off the hive. They are heavy with honey and may weigh up to 90 pounds each. The supers are taken to a warehouse. In the extracting room, the frames are tilted out and lowered into an "uncapper" where rotating blades shave away the wax that covers each cell. The uncapped frames are put in a carousel that sits on the bottom of a large stainless steel drum. The carousel is filled to capacity with 72 frames. A switch is flipped and the frames begin to whirl at 300 revolutions per minute; centrifugal force throws the honey out of the combs. Finally the honey is poured into barrels for shipment.

After this, approximately a quarter of the hives weakened by disease, mites, or an ageing or dead queen, will have to be replaced. To create new colonies, a healthy double hive, teeming with bees, can be separated into two boxes. One half will hold the queen and a young, already mated queen can be put in the other half, to make two hives from one. By the time the flowers bloom, the new queens will be laying eggs, filling each hive with young worker bees. The beekeeper's family will then migrate with them to their summer location.

*Adapted from "America's Beekeepers:
Hives for Hire" by Alan Mairson,
National Geographic.*

Questions 13-19

The flow chart below outlines the movements of the migratory beekeeper as described in Reading Passage 2

Complete the flow chart Choose your answers from the box at the bottom of the page and write your answers in boxes 13–19 on your answer sheet.

BEEKEEPER MOVEMENTS

Example

Example
In February, Californian farmers hire bees to help*pollinate*.....almond trees.

Answer

pollinate

In March, beekeepers ... (13) ... for migration at night when the hives are ... (14) ... and the bees are generally tranquil. A little ... (15) ... can ensure that this is the case.

They transport their hives to orange groves where farmers ... **(16)** ... beekeepers for placing them on their land. Here the bees make honey.

After three weeks, the supers can be taken to a warehouse where ... (17) ... are used to remove the wax and extract the honey from the ... (18)

After the honey collection, the old hives are rejected. Good double hives are ... **(19)** ... and re-queened and the beekeeper transports them to their summer base.

List of Words/Phrases

smoke	chemicals	pay
barrels	protection	charge
set off	light	split
pollinate	machines	supers
combs	screen	prepare
full	empty	queens

Questions 20-23

Label the diagram below Choose **ONE OR TWO WORDS** from the Reading Passage for each answer Write your answers in boxes 20-23 on your answer sheet.

**Questions 24-27**

Do the following statements agree with the information given in Reading Passage 2? In boxes 24-27 write.

YES	<i>if the statement agrees with the information given</i>
NO	<i>if the statement contradicts the information given</i>
NOT GIVEN	<i>if there is no information about this</i>

- 24 The Egyptians keep bees on the banks of the Nile.
- 25 First attempts at migratory beekeeping in America were unsuccessful.
- 26 Bees keep honey for themselves in the bottom of the hive.
- 27 The honey is spun to make it liquid.

READING PASSAGE 3

You should spend about 20 minutes on **Questions 28-41** which are based on Reading Passage 3 below.

TOURISM

A Tourism, holidaymaking and travel are these days more significant social phenomena than most commentators have considered. On the face of it there could not be a more trivial subject for a book. And indeed since social scientists have had considerable difficulty explaining weightier topics such as work or politics it might be thought that they would have great difficulties in accounting for more trivial phenomena such as holidaymaking. However there are interesting parallels with the study of deviance. This involves the investigation of bizarre and idiosyncratic social practices which happen to be defined as deviant in some societies but not necessarily in others. The assumption is that the investigation of deviance can reveal interesting and significant aspects of normal societies. It could be said that a similar analysis can be applied to tourism.

B Tourism is a leisure activity which presupposes its opposite namely regulated and organised work. It is one manifestation of how work and leisure are organised as separate and regulated spheres of social practice in modern societies. Indeed acting as a tourist is one of the defining characteristics of being modern' and the popular concept of tourism is that it is organised within particular places and occurs for regularised periods of time. Tourist relationships arise from a movement of people to and their stay in various destinations. This necessarily involves some movement that is the journey and a period of stay in a new place or places. The journey and the stay are by definition outside the normal places of residence and work and are of a short term and temporary nature and there is a clear intention to return "home within a relatively short period of time.

C A substantial proportion of the population of modern societies engages in such tourist

practices. New socialised forms of provision have developed in order to cope with the mass character of the gazes of tourists as opposed to the individual character of travel. Places are chosen to be visited and be gazed upon because there is an anticipation especially through daydreaming and fantasy of intense pleasures, either on a different scale or involving different senses from those customarily encountered. Such anticipation is constructed and sustained through a variety of non-tourist practices such as films, TV, literature, magazines, records and videos which construct and reinforce this daydreaming.

D Tourists tend to visit features of landscape and townscape which separate them off from everyday experience. Such aspects are viewed because they are taken to be in some sense out of the ordinary. The viewing of these tourist sights often involves different forms of social patterning with a much greater sensitivity to visual elements of landscape or townscape than is normally found in everyday life. People linger over these sights in a way that they would not normally do in their home environment and the vision is objectified or captured through photographs, postcards, films and so on which enable the memory to be endlessly reproduced and recaptured.

E One of the earliest dissertations on the subject of tourism is Boorstin's analysis of the pseudo event (1964) where he argues that contemporary Americans cannot 'experience reality' directly but thrive on "pseudo events. Isolated from the host environment and the local people, the mass tourist travels in guided groups and finds pleasure in inauthentic contrived attractions gullibly enjoying the pseudo events and disregarding the real world outside. Over time the images generated of different tourist sights come to constitute a closed self-perpetuating system of illusions which provide the tourist with the basis for selecting and

evaluating potential places to visit Such visits are made says Boorstin, within the “environmental bubble of the familiar American style hotel which insulates the tourist from the strangeness of the host environment

F To service the burgeoning tourist industry, an array of professionals has developed who attempt to reproduce ever-new objects for the tourist to look at These objects or places are located in a complex and changing hierarchy This depends upon the interplay between, on the one hand, competition between interests involved in

the provision of such objects and, on the other hand changing class, gender, and generational distinctions of taste within the potential population of visitors It has been said that to be a tourist is one of the characteristics of the “modern experience Not to go away is like not possessing a car or a nice house Travel is a marker of status in modern societies and is also thought to be necessary for good health The role of the professional, therefore, is to cater for the needs and tastes of the tourists in accordance with their class and overall expectations

Questions 28-32

Raiding Passage 3 has 6 paragraphs (A-F) Choose the most suitable heading for each paragraph from the list of headings below Write the appropriate numbers (i-ix) in boxes 28 32 on your answer sheet Paragraph D has been done for you as an example.

NB *There are more headings than paragraphs so you will not use all of them You may use any heading more than once.*

List of Headings

- i The politics of tourism
- ii The cost of tourism
- iii Justifying the study of tourism
- iv Tourism contrasted with travel
- v The essence of modern tourism
- vi Tourism versus leisure
- vii The artificiality of modern tourism
- viii The role of modern tour guides
- ix Creating an alternative to the everyday experience

28 Paragraph A

29 Paragraph B

30 Paragraph C

Example

Paragraph D

Answer

ix

31 Paragraph E

32 Paragraph F

Questions 33-37

Do the following statements agree with the views of the writer in Reading Passage 3? In boxes 33-37 write

- YES** if the statement agrees with the writer
NO if the statement contradicts the writer
NOT GIVEN if it is impossible to say what the writer thinks about this

Example	Answer
People who can't afford to travel watch films and TV.	NOT GIVEN

- 33 Tourism is a trivial subject.
34 An analysis of deviance can act as a model for the analysis of tourism.
35 Tourists usually choose to travel overseas.
36 Tourists focus more on places they visit than those at home.
37 Tour operators try to cheat tourists.

Questions 38-41

Chose one phrase (**A-H**) from the list of phrases to complete each key point below. Write the appropriate letters (**A-H**) in boxes 38-41 on your answer sheet.

The information in the completed sentences should be an accurate summary of points made by the writer.

NB There are more phrases A-H than sentences so you will not use them all. You may use any phrase more than once.

- 38 Our concept of tourism arises from ...
39 The media can be used to enhance ...
40 People view tourist landscapes in a different way from ...
41 Group tours encourage participants to look at ...

List of Phrases			
A	local people and their environment.	E	the individual character of travel.
B	the expectations of tourists.	F	places seen in everyday life.
C	the phenomena of holidaymaking.	G	photographs which recapture our holidays.
D	the distinction we make between work and leisure.	H	sights designed specially for tourists.

WRITING

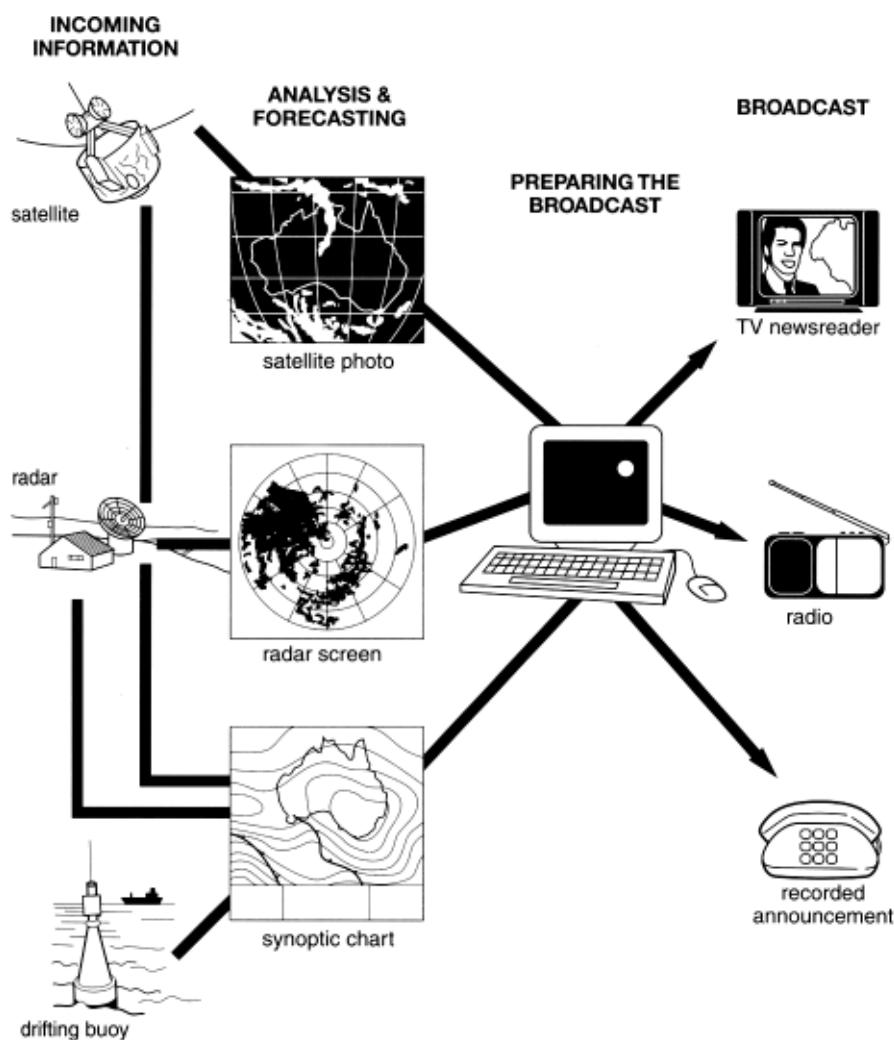

WRITING TASK 1

You should spend about 20 minutes on this task.

The diagram below shows how the Australian Bureau of Meteorology collects up-to-the-minute information on the weather in order to produce reliable forecasts.

Write a report for a university lecturer describing the information shown below.

You should write at least 150 words.

WRITING TASK 2

You should spend about 40 minutes on this task.

Present a written argument or case to an educated reader with no specialist knowledge of the following topic.

Should wealthy nations be required to share their wealth among poorer nations by providing such things as food and education? Or is it the responsibility of the governments of poorer nations to look after their citizens themselves?

You should write at least 250 words.

Use your own ideas, knowledge and experience and support your arguments with examples and with relevant evidence.

SPEAKING

CANDIDATE'S CUE CARD

Task 2

ASKING FOR AN EXTENSION

You have to give in a piece of work to your lecturer next Wednesday. You need two more weeks to prepare the assignment because you have had difficulty obtaining the reference books. Your examiner is your lecturer. Find out if you can have an extension.

Ask the examiner about:

- regulations regarding late work
- possibility of having more time
- different sources for books/information
- assistance with writing for overseas students

INTERVIEWER'S NOTES

ASKING FOR AN EXTENSION

The student is seeking extra time for an assignment.

- The student may need to write a letter.
- The student has had plenty of time to prepare the work and should not really need two more weeks.
- Provide some idea about where he/she may get hold of the books.
- Offer advice about the "Learning Assistance Centre" on the campus which helps students with essay writing.

After some resistance, agree to an extension of one week.
